

Ground Fault Detection Panels

The Propel Electric Ground Fault Detection panels provide durable and detailed functionality by both indicating the amount of current lost to ground as well as supply two alarm set points with time delays for remote alarming. The installation is easily done, by slipping a current transformer over the ground lead, and tying it into the panel. The proximity of the two can be up to 250 feet.

Additional Highlights of the Ground Fault Detection Panels:

- For systems up to 600VAC
- 24VDC or 120VAC Aux supply
- 0-5-25A Indication
- Two alarm set points
- Delays of 0-30 Sec
