

Motor Control Panels

The Propel Electric Motor Control panels are manufactured to the requirements of you the customer. We can make them with either Variable Frequency Drives or Soft Starts. The power management of either is easily handled from the front of the panel and/or remotely, by providing flexible control circuits.

The dynamic breaking and V/Hz starting control extends the life time of the motor. Countless years of knowledge helps to ensure worry free running.

Additional Highlights of the Motor Control Panels:

- 5-1500A panels
- Separate adjustable start and stop times
- RS485 communication for remote control
- Overcurrent protection
- Six error/trip indications: AC Supply, Control Supply, Overheated, Bypass Failure and Shear Pin
- Approvals available to meet UL, CSA and ABS standards, among others.
