

Navigation Light Panels

The Propel Electric Navigation Light panels are designed for either AC or DC navigation lights. The system is designed with the bridge crew in mind, so the quick overview of the functionality of the NAV Light Panel is facilitated by removing clutter from displays.

The quick-to buttons on the screen will enable easy switching form one navigation mode to another without having to deselect specific lights and select others.

Alarming for faulty lights is standard and can be optionally conveyed to VDR modules and Monitoring Systems.

Additional Highlights of the Navigation Light Panels:

- Up to 128 light monitoring and control
- For AC or DC systems
- Easy automated switch between upper and lower bulbs
- Dimmable displays
