

Generator Control Panels

The Propel Electric Generator Control panels are designed with the customer in mind and to fit the specifications required for the oil field and yachting industry. The many requirements we meet are ABS, USCG as well as IEEE45, among others.

Additional highlights of the Generator Control Panels:

- Control voltages from 63 to 690VAC direct or up to 14.4kV with PT.
- Easy installation
- Adaptable to any existing system
- PLC and touch screen monitoring of system
- Speed and voltage control
- Power Management
